+

Privateers NV mapping supports a study of this area's unique land use system, which is arguably the oldest and most durably sustained land use system of the planet. Without external inputs or terracing, the land use system maintains soil fertility and staves-off hunger in one of the most crowded regions of Ethiopia. Understanding of this system is most likely to be relevant to the enhancement of health and productivity in many regions of the world.

Southern Ethiopian Highlands with lake Abaya in the East

**EARSeL, 21st Symposium, Marne-la-Vallée, France, 15-18 May 2001**
